MEDIA PLANNER

The only publication written exclusively for professionals who choose, specify, purchase and rely on offender monitoring technology ...

Only *The Journal of Offender Monitoring* delivers a paid professional readership keenly interested in learning about and using the latest electronic monitoring technology. Building on CRI's 16,000-customer base in corrections, probation, and offender supervision, JOM is the only paid circulation journal read by top-level administrators responsible for decisions on the purchase of monitoring technology, including:

- Private monitoring service providers
- Chief probation officers
- Halfway houses and community corrections agencies
- Pre-trial and court administrators
- State Directors of Corrections in all 50 states
- Federal and state prison wardens and superintendents
- Jail administrators
- Sheriffs

Bonus circulation reaches agencies and professionals concerned with DUI/DWI monitoring and testing, domestic violence and victim protective services, and substance abuse and sex offender treatment providers.

Superior strap technology is just one way that Omnilink® delivers significantly fewer alerts.

Standard Straps

Straps generate a high volume of false tamper alerts.

Staff struggle to determine which alerts are real quickly enough to respond effectively.

Vendors create complex logic and system-imposed grace periods to try to determine which alerts are real.

Offenders can quickly remove and reassemble their monitors without detection and/or abscond for days without intervention.

Offenders commit crimes unimpeded by law enforcement.

Omnilink Patented Strap

Strap virtually eliminates intermittent disruptions that cause a high volume of false alerts.

In an independent test, one million pulls on Omnilink's strap assembly failed to produce a single false strap tamper alert.

Staff can trust that strap tamper alerts are real and respond swiftly.

It is possible to apprehend offenders that tamper or abscond before crimes are committed.

Public safety remains intact.

Would significantly fewer alerts make a big impact in your day?
